Instruction **D11058**

February 2019

Instructions

These instructions are intended for personnel who are responsible for the installation, operation and maintenance of your knife gate valve, with optional deflection cone.

Safety Messages

All safety messages in the instructions are flagged with the word Caution, Warning or Danger. These messages must be followed exactly to avoid equipment damage, personal injury or death.

Safety label(s) on the product indicate hazards that can cause equipment damage, personal injury or death. If a safety label becomes difficult to see, or if a label has been removed, please contact DeZURIK for replacement.

WARNING

Personnel involved in the installation or maintenance of valves should be constantly alert to potential emission of process material and take appropriate safety precautions. Always wear suitable protection when dealing with hazardous process materials. Handle valves which have been removed from service with the assumption of process material within the valve.

Inspection

Your Deflection Cone has been packaged to provide protection during shipment. Carefully inspect the unit for damage upon arrival and file a claim with the carrier if damage is apparent.

Description

The optional deflection cones are available for KGC ES, HD and MD styles, along with legacy KGS and KGL knife gate valves.

Installation

Refer to installation drawing A81133 for any necessary deflection cone dimensional information.

Install deflection cone into the valve body on the side opposite the seat, with the conical portion pointed towards the seat side.

The cone should be flat and concentric with the valve body's raised face.

Metal deflection cones require a gasket to be utilized between the inner cone flange and the valve body's raised face and between the outer cone flange and the process mating flange.

Urethane deflection cones do not require a gasket between the inner cone flange and the valve body's raised face; nor is a gasket required between the outer cone flange and the process mating flange. However, use of gaskets is not detrimental to urethane cones.
