

APCO AVV AIR/VACUUM VALVE & DUAL BODY COMBINATION AIR VALVES

For Water and Other Clean Fluids

Body Style 140/140H
 140: .5-3" (15-80mm)
 140H: 1-3" (25-80mm)

Body Style 150
 4-18" (100-450mm)

Body Style 1800/1800K
 1-18" (25-450mm)

With Surge Check Valve Option for Slow Closing

**Slow Closing Air/Vacuum
 Valve, AVV Body Style 150
 with CSV Surge Check Valve**

**Slow Closing Dual Body
 Combination Valve, AVV Body
 Style 1800/1800K with CSV
 Surge Check Valve**

Compliant with AIS and BABA Requirements for Federally Funded Water Projects

APCO Clean Water Air Valves can be specified to meet the requirements of the American Iron and Steel (AIS) Act and the Build America, Buy America (BABA) provisions of the Infrastructure Investment and Jobs Act (H.R. 3547). These provisions apply to projects funded through the Clean Water State Revolving Fund (CWSRF) and the Drinking Water State Revolving Fund (DWSRF), helping ensure compliance with domestic sourcing mandates for federally funded infrastructure projects.

NSF/ANSI/CAN 61, 372 Certified Safety for Municipal Drinking Water Applications

APCO Clean Water Air Valves can be certified to meet NSF/ANSI/CAN 61 and NSF/ANSI/CAN 372 standards for Drinking Water System Components - Lead Content, ensuring trusted protection and regulatory compliance in municipal water service applications. When NSF certification is specified, it confirms that materials in contact with drinking water meet stringent health and safety requirements for potable water systems.

How Do Air/Vacuum Valves Work?

The function of an Air/Vacuum Valve is to protect a pipeline from damage. Air/Vacuum Valves expel large quantities of air when filling the pipeline and admit large quantities of air to relieve a vacuum when draining the pipeline. APCO AVV Air/Vacuum Valves are float operated and have a large discharge orifice, equal in size to the valve inlet, for efficient filling and draining of pipelines.

When filling a pipeline, the Air/Vacuum Valve is open. Once the pipeline is filled, the Air/Vacuum Valve closes and remains closed during normal operation. When the pipeline is drained, the pressure returns to atmospheric, and the Air/Vacuum Valve will immediately open to allow air to re-enter the pipeline to prevent a vacuum from developing. In this way, the large venting orifice protects against vacuum and water column separation or pipeline collapse.

Design & Construction

The Air/Vacuum Valve consists of a body, cover, baffle, seat and stainless steel float. The baffle is designed to protect the float from direct contact with rushing air or slugs of water which prevents premature shutoff. The resilient seat is fastened to the valve cover and can be easily removed if needed. The 316 stainless steel float is center guided at each end for positive seating.

The following body styles are available:

- **AVV Air/Vacuum Valve Body Style 140**
The APCO Air/Vacuum Valves in Body Style 140, in sizes .5-3" (15-80mm), are available in ductile iron bodies with a threaded NPT inlet and outlet as standard. ASME 125/150 or 250/300 flanged outlets are available as an option.
- **AVV Air/Vacuum Valve Body Style 140H**
The APCO Air/Vacuum Valves in Body Style 140H are designed for higher pressure service and are available in sizes 1-3" (25-80mm).
- **AVV Air/Vacuum Valve Body Style 150**
The APCO Air/Vacuum Valves in Body Style 150, in sizes 4-18" (100-450mm), with ASME 125/150 or 250/300 flanged inlets and a plain outlet with steel protector hood as standard. Threaded or flanged outlets are available for valves used inside a pump house.

Refer to APCO Air Valve Selection & Sizing Guide, Bulletin 610, for Air/Vacuum Valve sizing data and formulas.

Body Style 140/140H

Body Style 150

Dual Body Combination Air Valves

APCO AVV Dual Body Combination Air Valves combine an Air/Vacuum Valve with an Air Release Valve. Combination Air Valves, also called double orifice valves, are typically installed on all high points of a system where it has been determined that the functions of both an Air/Vacuum Valve and an Air Release Valve are needed to vent and protect a pipeline.

The Dual Body Combination Air Valve body styles 1800/1800K include an Air/Vacuum Valve piped with a shutoff valve to an Air Release Valve. The Air/Vacuum Valve expels large quantities of air when filling and admits air to relieve vacuum when draining.

The Air Release Valve prevents small air pockets from accumulating at the high points of the pipeline that can restrict flow. The Air Release Valve operates under pressure to release entrapped air in the pipeline. The Air Release Valve stays normally closed to prevent the pipeline fluid from escaping. When enough air accumulates to form a pocket, the float lowers and opens the valve orifice to release air. The air release valve then closes until more air accumulates and the opening cycle repeats automatically. By relieving air pockets that restrict flow, a Combination Air Valve can quickly pay for itself in minimizing head loss, which results in reduced energy costs.

The dual body style allows use of a wide variety of Air Release Valves with a range of orifices and higher operating pressures. DeZURIK also offers two styles of APCO Single Body Combination Air Valves - the APCO AVC Single Body Combination Air Valves or ASU High Performance Single Body Combination Air Valve. Single body styles are used where compactness is preferred, and/or where risk of tampering exists due to accessibility of the installation. Refer to separate product bulletins for details.

Refer to APCO Air Valve Selection & Sizing Guide, Bulletin 610, for Air Release Valve sizing data and formulas.

Body Style 1800/1800K

Options & Accessories

Surge Check Valve (CSV)

An APCO AVV Air/Vacuum Valve combined with a CSV Surge Check Valve creates an optimal Slow Closing Air/Vacuum Valve. The Slow Closing Valve is designed to prevent critical shock conditions occurring in installations where the operating conditions cause a regular air valve to slam open or closed. This slow closing feature protects the Air/Vacuum Valve and the pipeline from damage. The CSV Surge Check Valve is available on either Single Body or Dual Body Combination Air Valves.

Refer to Surge Check Valve Bulletin 613 for sizing, selection and ordering information.

Slow Closing Air/Vacuum Valve, AVV Body Style 150 with CSV Surge Check Valve

Slow Closing Dual Body Combination Valve, AVV Body Style 1800/1800K with CSV Surge Check Valve

Double Acting Throttling Device (DAT)

The Double Acting Throttling Device (DAT) is fitted on the discharge orifice of the Air/Vacuum Valve to provide both throttling air out and full flow air in.

Air/Vacuum Valves efficiently discharge air from deep well pump columns when combined with an APCO Double Acting Throttling Device (DAT). Available on valves sizes 0.5-8" (15-200mm) valve sizes.

Water Diffuser (WD)

APCO Water Diffusers perform much like water faucet strainers, breaking down the solid water column force into a smooth, non-destructive flow. Water Diffusers (WD) are available in 0.5-3" (15-80mm) sizes.

Bug Screen or Rock Screen (HSB/HSR)

Standard outlets on Air/Vacuum Valves in sizes 4-18" (100-450mm) are plain with a steel protector hood. Bug and rock screens are available as an option to provide additional protection to prevent debris from entering the Air/Vacuum Valve.

Mushroom Cap (MRC)

Mushroom Caps are available as an option on .5-18" (15-600mm) valves. They are installed in the threaded outlet for discharge protection.

AVV Air/Vacuum Valve with Double Acting Throttling Device (DAT) and Water Diffuser (WD) options.

Mushroom Cap (MRC)

Bug Screen or Rock Screen (HSB/HSR)

Vacuum Relief / Air Inlet (AVRT)

The AVV-140 with AVRT Option is equipped with a spring that makes it a normally closed valve. The AVV-140 AVRT remains closed until the pressure differential becomes negative in relation to the atmosphere around the valve. In the event of vacuum in the pipeline, the AVV-140 AVRT opens and allows air into the pipeline and equalizes the pressure. Once pressure equalizes, the AVV-140 AVRT automatically closes. Available .5-3" (15-80mm), not available with body style 140H.

AVV-140 AVRT Option

Adjustable Vacuum Relief (ADJ)

The Adjustable Vacuum Relief is available on .5-3" (15-80mm) valve sizes with the AVRT Vacuum Relief/Air Inlet only. To order, specify pressure range and set point on the order. 0-5 psi (0-35 kPa) negative pressure/vacuum setting - lower settings available.

Isolation Valves

DeZURIK Butterfly Valves are an economical and reliable isolation valve that can be mounted on the inlet of the Air/Vacuum Valve. Their short face-to-face dimension can permit a reduction in trench depths, saving excavation costs. Butterfly isolation valves should be ordered as separate items.

Butterfly Valve

Typical Air Valve Manhole Installation

Materials of Construction

Body Style 140

Item	Description	Material
A01	Body	Ductile Iron, ASTM A536/A351, Grade 65-45-12
		Carbon Steel, ASTM A216
		316 Stainless Steel, ASTM A743
A02	Cover	same as body material
A03	Cover Gasket	Acrylonitrile-Butadiene (NBR)
		Terpolymer of Ethylene Propylene and A Diene (EPDM)
		Fluoro Rubber (FKM)
A04	Cover Bolts	Steel, ASTM A449, Grade 5, SAE J429,
		316 Stainless Steel
		Zinc-Plated Carbon Steel
A05	Washer (valves with optional Fusion Bonded Epoxy Coating only)	Zinc-Plated Carbon Steel; Stainless Steel Type 316
A06	Seat	Acrylonitrile-Butadiene (NBR)
		Terpolymer of Ethylene Propylene and a Diene (EPDM)
		Fluoro Rubber (FKM)
A14	Float	316 Stainless Steel, ASTM A240
A24	Baffle	316 Stainless Steel, ASTM A743
A25	Pipe Plug	Steel Alloy SAE J502, Stainless Steel Type 316
A26	Float Bushing (3" only - not pictured)	316 Stainless Steel, ASTM F593
A33	Float Guide	316 Stainless Steel ASTM A276
A34	Baffle Screws	316 Stainless Steel
A41	Baffle Plug (.5 - 2" only)	316 Stainless Steel ASTM F593
A44	Optional Water Diffuser (not pictured)	316 Stainless Steel ASTM A240
A50	Inlet Nipple, F1/F2 Inlet Connection Only (not pictured)	316 Stainless Steel ASTM F593, Steel ASTM A53
A51	Inlet Flange, F1/F2 Inlet Connection Only (not pictured)	Steel ASTM A105, 316 Stainless Steel ASTM A240
A54	Outlet Nipple, Optional Flanged Outlet Only (not pictured)	316 Stainless Steel ASTM F593, Steel ASTM A53
A55	Outlet Flange, Optional Flanged Outlet Only (not pictured)	Cast Iron ASTM A126, Steel ASTM A105, Stainless Steel ASTM A276, 316 Stainless Steel ASTM A240

Applicable Standards

APCO ARV Air/Vacuum Valves are designed and/or tested to meet the following standards:	
AWWA C-512	Air-Release, Air/Vacuum, and Combination Air Valves for Waterworks Service
ASME B16.5	F1/ASME Class 150 & F2/ASME Class 300 style flanged valves made from carbon steel or stainless steel.
ASME B16.42	F1/ASME Class 150 & F2/ASME Class 300 style flanged valves made from ductile iron.
NSF/ANSI-61	Certified to NSF/ANSI-61 Drinking Water System Components.
NSF/ANSI-372	Certified to NSF/ANSI-372 Drinking Water System Components – Lead Content.

Valve Sizing

Refer to the APCO Valve Selection & Sizing Guide, Bulletin 610, for Air/Vacuum and Air Relieve Valve orifice sizing and formulas.

Refer to Bulletin 613 for details on APCO Surge Check Valves for Slow Closing.

Ordering

Orders should specify quantity and order code identification, in proper sequence, as shown.

Valve Style

Give valve style code as follows:

AVV = Air/Vacuum Valves

Valve Size

Give valve size code as follows:

.5	=	.5"	15mm	8	=	8"	200mm
1	=	1"	25mm	10	=	10"	250mm
2	=	2"	50mm	12	=	12"	300mm
3	=	3"	80mm	14	=	14"	350mm
4	=	4"	100mm	16	=	16"	400mm
6	=	6"	150mm	18	=	18"	450mm

Body Style

Give body style code as follows:

140 = NPT Outlet, Same size as inlet, .5-3"
140H = NPT Outlet, High Pressure, Same size as inlet, 1-3"
150 = Plain Outlet with Hood, 4-18"
1800 = Customized Dual Body 140 or 150 Body Style with ARV Air Release Valve" 1-3" with ARV 50A; 4-18" ARV 50A, 200A, or 200 based on orifice size selection

Note: Body Style 1800 will be assembled complete at the factory. Body Style 1800K will be shipped as a kit including 1 AVV, 1 ARV, and all necessary connecting parts.

Inlet Connection

Give inlet connection code as follows:

Body Style 140 and 1-3" 1800/1800K

T1 = Threaded Inlet NPT
F1N = Flanged Inlet ASME 125/150, Nipple & Flange
F2N = Flanged Inlet ASME 250/300, Nipple & Flange

Body Style 140H

T1 = Threaded Inlet NPT
F6N = Flanged Inlet ASME 400/600, Nipple & Flange

4-18" Body Style 150/1800/1800K

F1 = Flanged Inlet ASME 125/150, Cast Flange
F2 = Flanged Inlet ASME 250/300, Cast Flange

Body Material

Give body material code as follows:

DI = Ductile Iron
.5-3" Body Styles 140, 1800 & 1800K
4-12" F1; 4" F2
Nipple & Flange are Carbon Steel with F1N or F2N Inlet
CI = Cast Iron (14-18" F1; 6-18" F2)
CS = Carbon Steel
S2 = 316 Stainless Steel

Cold Working Pressure

Give body material code as follows:

Body Style 140, 1800, 1800K

15 = .5-3", 3-15 psi, All Body Materials
150 = .5-2" F1N, 11-250 psi, DI body material
.5-2" F1N, 11-275 psi, S2 body material
.5-2" F1N, 11-285 psi, CS body material
300A = .5-2" T1 or F2N, 11-300 psi, All body materials
200 = 3", 11-200 psi, All body materials

Body Style 140H

300 = 11-720 psi, S2 body material
11-740 psi, CS body material
400 = 11-960 psi, S2 body material
11-990 psi, CS body material
600 = 11-1440 psi, S2 body material
11-1480 psi, CS body material

Body Style 150, 1800, 1800K

15 = 4-18" 3-15 psi All body materials
125 = 10-12" 11-200 psi, DI body material
14-18" 11-150 psi, CI body material
150 = 4-8" 11-250 psi, DI body material
4-8" 11-275 psi, S2 body material
4-8" 11-285 psi, CS body material
250A = 4-12" 11-500 psi, CI/DI body material
14-18" 11-300 psi, CI body material
150 = 10-12" 11-250 psi, DI body material
10-18" 11-275 psi, S2 body material
10-18" 11-285 psi, CS body material
300 = 4-18" 11-720 psi, S2 body material
4-18" 11-740 psi, CS body material

Trim Combination

Seating Material

Give seating surface material code as follows:

NBR = Acrylonitrile-Butadiene
EPDM = Terpolymer of Ethylene Propylene & A Diene
FKM = Fluoro Rubber

Bushing Material

Give bushing material code as follows:

S2 = 316 Stainless Steel (.5-3")

Baffle Material

Give baffle material code as follows:

S2 = 316 Stainless Steel (.5-3")
NA = Not Required (4-18")

Float Material

Give float material code as follows:

S2 = 316 Stainless Steel

Ordering continued on next page.

Notes:

Isolation valve is recommended. Order as a separate item.

Maximum operating temperature is a function of the materials used in the valve. All valves are rated to a maximum temperature of at least 250° F (121° C). Contact application engineering if the valve is required to operate above this temperature.

Working pressure is de-rated at temperatures over 100° F.

Limiting factor for pressure will be the lowest rating of the End Connection, CWP, Orifice Selection, and CSV check valve.

DI Body Material CSV Pressure rating: for 1" size is 400 psi CWP, 2" size is 600 psi CWP, 3-18" F1/F1N is 250 psi CWP, 3-12" F2 400 psi CWP, 14" and larger F2 is 300 psi CWP.

Ordering (Continued)

Air Release Valve Orifice Size

CI, CS, and DI will use a DI ARV, S2 will use an S2 ARV. Needle material will be the same as the selected seating surface. All other trim will be S2.

Body Style 1800 or 1800K Only - Not required on other Body Styles

R332	=	3/32", 8-175 psi, 1" Body Style 50A (DI body available with NBR
R116	=	1/16", 11-300 psi, 1" Body Style 50A (DI body available with NBR
		Seat/Needle only)
L516	=	5/16", 3-15 psi, 1" Body Style 200A (Available with 15 CWP only)
R516	=	316 Stainless Steel
R14	=	1/4", 11-75 psi, 1" Body Style 200A
R316	=	3/16", 11-150 psi, 1" Body Style 200A
R532	=	5/32", 11-300 psi, 1" Body Style 200A
M332	=	3/32", 11-600 psi, 1" Body Style 200A
L12	=	1/2", 3-15 psi, 2" Body Style 200 (Available with 15 CWP only)
R12	=	1/2", 11-75 psi, 2" Body Style 200
R38	=	3/8", 51-150 psi, 2" Body Style 200 (Not used with 15 CWP)
M732	=	7/32", 51-300 psi, 2" Body Style 200 (Not used with 15 CWP)

Options

Give option code as follows:

AIS	=	American Iron and Steel. Valves conform to Consolidated Appropriations Act, 2014 section 436 (EPA, Clean Water and Drinking Water State Revolving Funds) and Consolidated Appropriations Act, 2017 section 746 (USDA RUS Water & Environmental Programs (WEP)).
BABA	=	Build America, Buy America (LW, LS, AC closure control devices only)
NSF	=	NSF approved
AVRT	=	Vacuum Relief/Air Inlet (.5-3") not available with 140H
CSV	=	Surge Check Valve, Body Style 1600A. 1-2" Will be certified lead free bronze body and plug. For all other sizes, body material same as above. CI and CS valves will use a DI check valve. Plug and seat will be S2 (available with 1-18" Body Style 140, 150, 1800, or 1800K, Not available with 3" T1 End Connection)
DTR	=	DeZURIK Standard Certified Production Hydrostatic Shell & Seat Test Report
FL	=	Flanged Outlets ASME 125/150, .5-3" are CS Nipple and CI Flange with DI body material, all others are the same as the body material (.5-18")
TH	=	Threaded Outlets NPT (4-8")
HSB	=	Bug Screen - 304 Stainless Steel - for Hood (4-18")
HSR	=	Rock Screen - 304 Stainless Steel - for Hood (4-18")
SB16	=	316 Stainless Steel Bolting
WD	=	Water Diffuser (.5-3" Body Style 140/1800/1800K only)
----	=	Special Coatings, Contact DeZURIK

Accessories

Give accessory code as follows if required

DAT	=	Double Acting Throttling Device (.5-8"); 4-8" must be used with TH option.
MRC	=	Mushroom Cap - Not Available with 150 Body Style, or FL Option on .5-3"

Ordering Example:
