Installation Instructions

Clean Liquids and Clean Gases

The proper installation of a DeZURIK PEF 100% Eccentric Plug Valve in clean liquids and gases applications is with the higher pressure against the end opposite the seat.

Liquids with Suspended Solids and Dirty Gases

The proper installation of a DeZURIK PEF 100% Eccentric Plug Valve in suspended solids applications such as raw sewage is critical to prevent solids from packing into the valve body, restricting the plug movement. This can be accomplished by installing the valve with the flow against the face of the plug in the closed position and the valve on its side with the plug rotating to the top of the pipeline in the open position. For pump isolation service, install the valve with the seat side opposite the pump and with the plug rotating to the top of the pipeline in the open position.

Manual Actuators

Pressure Ratings

Direct shutoff pressure differentials for nut or lever actuated valves must not exceed the limits shown below. If valves must seal higher pressure, use gear actuators. Gear or powered actuators are recommended on 6" (150mm) and larger valves as well as on applications where pipeline velocities are high and where sudden valve closure may cause water hammer. Valves for gas service must be furnished with gear or cylinder actuator.

2" Square Nut (NT)

Furnished as standard on 3-8" (80-200mm) valves. Must be ordered to use VB, ENLVA, EF, LVA, CHA, LVF, and WRT. To order, add code NT to basic valve code.

Manual Gear Actuators

The G-Series and MG manual actuators construction are totally enclosed and sealed, protecting moving parts from damage or corrosion. Continual lubrication is not required for operational ease. Heavy duty, corrosion-resistant actuator bearings provide lasting, easy valve operation and overall reliability. Rugged actuator castings, gears and shafts also add to reliability by assuring permanent alignment of moving parts for smooth operation.

To order, add the appropriate actuator code from the sizing tables to the valve order code. Order codes in charts are for weatherproof nut actuator. For Buriable Actuator, change GS to GB or MG to MGB. Buriable actuators have ductile iron gear sector, completely enclosed mounting bracket and actuator cover.

Cylinder Actuators

G-Series cylinder actuators feature a rack and pinion design for larger size rotary valves where constant torque capability throughout the stroke is required. They are engineered for high flow, high cycle applications. The G-Series line of actuators provides long service life and features a rugged, heavy cast gear sector. The cast iron actuator housing is sealed to prevent the entry of dirt, moisture and corrosive contaminants. The G-Series actuator also features adjustable position stops, rugged cylinder construction and corrosion-resistant bearings.
